EDUCATION

M.S. in Business Analytics <i>Boston University, Questrom School of Business, Boston, MA</i>	Aug 2024 – Jan 2026 GPA: 3.58
B.A. in Economics, minor in Political Science <i>National Taiwan University, Taipei City, Taiwan</i>	Aug 2014 – Jan 2019

WORK EXPERIENCE

CTBC Bank (a leading private commercial bank in Taiwan) <i>Retail Credit Risk Analyst</i>	Taipei City, Taiwan Jul 2020 – May 2023
- Developed Loss Given Default (LGD) forecasting models for mortgage loans using SAS and SQL, streamlining the process by narrowing 16,000 predictors to 10 key variables through feature engineering, improving model discrimination by 18% (Gini coefficient) - Led research and modeling of typhoon flood impact on mortgage collateral by analyzing meteorological open data with ArcGIS (geographic information analysis software), resulting in a patented geographic risk model in Taiwan. - Led three risk analysis projects across mortgage, personal loans, and credit cards; one project resulted in a proactive credit card account closure policy that was successfully implemented.	
Taipei Fubon Commercial Bank <i>Institutional Credit Risk Analyst</i>	Taipei City, Taiwan Jul. 2019 – Jun. 2020
- Conducted credit risk analysis on 8+ large corporate borrowers with USD 10M+ exposure per case, evaluating financial metrics and conducting macroeconomic stress testing to support credit approval decisions - Managed end-to-end credit assessment processes including internal credit rating evaluations, risk case documentation, and credit approval workflow coordination - Enhanced Excel VBA financial forecasting models to expand applicability across companies of various sizes and industries, improving credit analysis efficiency	
E.Sun Commercial Bank <i>Credit Card Marketing Intern</i>	Taipei City, Taiwan Jul 2018 – Aug 2018
- Supported bank-wide customer marketing list query requests using SQL to inform marketing campaign strategies. - Conducted credit card marketing research using Tableau dashboards - Proposed a redesigned mobile banking credit card dashboard UI, which was adopted after my internship.	

ACADEMIC PROJECT EXPERIENCE

Predicting IMDb Movie Ratings — A Multimodal Deep Learning Framework <i>BA890: Analytics Practicum (Research Project), Questrom School of Business, Boston, MA</i>	Jun 2025 – Aug 2025
- Consolidated 4,800+ films across nearly 40 years from three film databases and built a multi-page interactive Tableau dashboard with dimensional filters, trend lines, and distribution analysis. - Extended EDA findings on studio release strategies in seasonality, budget allocation, and runtime positioning into a multimodal deep learning framework built in PyTorch and trained on NVIDIA A100 GPU. - Achieved an average prediction error within ± 0.6 IMDb rating points (0–10 scale) on the validation set, denoting a 30% reduction compared to traditional ML baselines that use only structured features (budget, genre, runtime), and demonstrating the effectiveness of deep learning for pre-release rating prediction without audience feedback.	
Real-Time Intense Care Unit Demand Forecasting for Hospital Capacity Planning <i>BA878: Machine Learning in Healthcare, Questrom School of Business, Boston, MA</i>	Sep 2025 – Dec 2025 Grade: A
- Built a comprehensive Intensive Care Unit (ICU) bed demand forecasting framework using MIMIC-IV data to support hospital ICU resource planning. - Developed two independent XGBoost-based predictive models to estimate ICU inflow from the emergency department within 12 hours and ICU outflow via 72-hour readmission risk after ICU discharge. - AUC = 0.96 for ICU inflow and 0.72 for ICU outflow model, exceeding performance reported in prior literature.	

U.S. Military Base Slot Machine Revenue Explorer

Sep 2025 – Dec 2025

DS701: Tools for Data Science, Faculty of Computing & Data Sciences, Boston, MA

Grade: A

- U.S. military has publicly released data on internal slot machine revenue, locations, and related metrics. We supported MuckRock, a nonprofit investigative journalism organization, by cleaning and analyzing these datasets.
- Built a layout-aware, rule-based data extraction pipeline to parse borderless PDF tables into clean, analysis-ready datasets using Python.
- Achievement: Parsed and structured 203 pages of borderless, irregular PDF tables in 3 minutes, reducing manual data processing time from days to minutes.

CASE COMPETITION EXPERIENCE

Humana-Mays 2024 Healthcare Analytics Case Competition

Sep 2024 – Nov 2024

Placed in the Top 50 (Round 2) and AUC scored in the Top 10 among 200+ teams

- Identified “unengaged” Humana members (those lacking a preventive PCP visit) and proposed data-driven strategies to increase visit rates.
- Engineered and selected features across 14 datasets (500+ variables), building an optimized XGBoost model

SKILLS

Programming: Python, SQL, Excel VBA

Machine Learning / Deep Learning: PyTorch, TensorFlow, PySpark

Big Data: PySpark, BigQuery

Cloud: Google Cloud Platform

Data Visualization: Tableau

Geospatial Analysis: ArcGIS

Statistics: SAS (Base Programming Certified)
